SUMMARY

Computer Engineering student with strong CS fundamentals (DSA, OOP, DBMS, Networks) and a track record of shipping complete software end to end — a multi-layer detection engine, an NLP classification pipeline, a production client website, and a peer-reviewed IEEE paper. Comfortable owning a problem from requirements through delivery, testing for edge cases and quality, and translating technical work into outcomes for non-technical stakeholders. Seeking an Associate Analyst role in Deloitte's Technology & Transformation practice to bring hands-on engineering, structured problem-solving, and client-facing delivery experience to enterprise technology projects.

TECHNICAL SKILLS

Languages: Java, JavaScript (ES6+), C, HTML5, CSS3
Core CS: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems, Computer Networks
Testing & Quality: Rule-based validation, layered/module testing, precision-recall-F1 evaluation, edge-case analysis, UAT-style bug tracking
ML / NLP: scikit-learn, NLTK, TF-IDF, Naive Bayes, Logistic Regression, model evaluation
Cloud & Tools: AWS (EC2, S3, IAM, VPC, Lambda), Git, GitHub, VS Code, Agile/Scrum collaboration
Business & Delivery: Requirements gathering, client communication, funnel/analytics instrumentation (Meta Ads, Pixel), documentation

PROJECTS

NiceTry — 7-Layer Phishing Detection Engine — Python *2026*

- Designed a detection engine that scores a target across seven independent analysis layers — lexical URL analysis, domain/WHOIS age, SSL certificate checks, redirect-chain tracing, page/form content inspection, reputation lookups, and heuristic scoring — fused into a single weighted confidence score, similar in spirit to multi-check quality gates in a QA or governance pipeline.
- Built each layer as a self-contained, independently testable module so the engine degrades gracefully when one external check is slow or unavailable, rather than failing closed on a single signal — a resilience pattern applicable to enterprise system integrations.
- Tuned layer weights against a labelled set of 30,000 phishing and benign URLs to reduce false positives on legitimate domains, reaching 94% detection accuracy.

Sentiment Analysis Engine — NLP Classifier — Python, scikit-learn, NLTK *2025*

- Built an end-to-end text classification pipeline: cleaning → tokenization/lemmatization → TF-IDF vectorization → training → evaluation → inference.
- Benchmarked Naive Bayes against Logistic Regression and selected the final model on F1 score rather than raw accuracy, so minority-class performance wasn't masked by class imbalance — 87% F1 on IMDb movie reviews.

tejaldesae.com — Freelance Client Website — HTML, CSS, JavaScript *2026*

- Shipped a production website end-to-end for a live coaching business client, from requirements gathering through deployment, as a custom static site with no framework or backend — direct client ownership from scoping to delivery.
- Set up Meta Ads Manager and integrated the Meta Pixel for conversion tracking, instrumenting the signup funnel to measure drop-off and attribute leads back to ad campaigns.
- Built a 4-step application form with auto-saved drafts and honeypot-based bot protection, reducing abandoned submissions and spam.

Veherex — EV Comparison & Recommendation Platform — HTML, CSS, JavaScript *Jan–Mar 2025*

- Built the full frontend for an EV comparison platform for Indian buyers, including a rule-based filtering engine matching users to vehicles by budget, range, and charging availability.
- Co-authored a research paper on the platform, accepted at IEEE I3CTCON 2026 (peer-reviewed, Lonavala, India).

EDUCATION

B.Tech, Computer Engineering (Minor: Data Science) — Ramrao Adik Institute of Technology, DY Patil University *Pursuing — CGPA: 7.91*

12th (HSC), V.S. Gangan Jr. College, Ratnagiri *2023 — 69.17%*

10th (SSC), Sacred Heart Convent School, Ratnagiri *2021 — 85.80%*

CERTIFICATIONS

- AWS Academy Graduate — Cloud Foundations, Amazon Web Services (2026)
- CS50P — Introduction to Programming with Python, Harvard/edX (Aug 2024)

RESEARCH

- VEHEREX: A Personalized EV Recommendation Platform — accepted at IEEE I3CTCON 2026, Lonavala, India.
